

USJFCOM fact sheet

Joint Intelligence Laboratory

U.S. Joint Forces Command's (USJFCOM) Joint Intelligence Laboratory (JIL) focuses on improving intelligence capabilities and supporting the integration of intelligence, operations, and plans. The JIL provides tailored intelligence expertise, products, and tools to advance joint intelligence concept development and experimentation.

Managed by the Joint Transformation Command for Intelligence (JTC-I), the JIL supports DoD's and the intelligence community's intelligence transformation by discovering emerging processes, methodologies, and technologies to enhance the intelligence discipline, while supporting the transformational activities of DoD and the intelligence community by participating in multiple community events.

The JIL is a full service, all-source intelligence laboratory using current and emerging concepts, processes, methodologies, and technologies to address intelligence needs and improve business intelligence processes. To that end, the JIL provides transformational intelligence capabilities, access to subject matter expertise at multiple organizations and feedback on intelligence processes, methodologies and technologies.

The JIL accomplishes its mission through partnerships within DoD, industry, and academia. These partners include:

- The National Geospatial-Intelligence Agency;
- The National Security Agency;
- The Defense Intelligence Agency;
- The National Reconnaissance Office;
- The Disruptive Technology Office;
- The Defense Advanced Research Projects Agency;
- And various other service and national labs.

A new 16,000 square foot laboratory will provide advanced immersive visualization of complex databases from several national intelligence agencies and military services with the incorporation of the Knowledge Advanced Visualization Environment and Knowledge Wall technology environments.
